                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel polypeptide, double strand RNA joint zinc finger protein 25.19 and the polynucleotide encoding it. The polypeptide is useful in treating various diseases, such as embryo development malformation, tumours, immunological diseases and diabetes. The present invention also discloses the antagonist resisting the polypeptide and its treatment effect, and the application of the polynucleotides for encoding double strand RNA joint zinc finger protein 25.19. The sequence represents the zinc finger protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide-double strand RNA joint zinc finger protein 25.19 and polynucleotide encoding the polypeptide -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

recombination, of a promoter replacement fragment with a heterologous promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal cells having both alleles modified are useful for identifying a gene that cells having both alleles modified are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modulates the activity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional, compound catabolism, biosynthetic, transporter, transcriptional, compound subolism biosynthetic, identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of an essential Candida albicans protein useful is not represented in the printed specification but is based on sequence information supplied to Derwent by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, DNA-binding protein, histone, chromo domain protein, chromatin organisation modifier, Y-box binding protein, DNA organisation, gene transcription, malignant disease, autoimmune disorder, rheumatic disease, genetic abnormality, infectious disease, neurological disorder, gene therapy, immunomodulatory, anti-HIV, anti rheumatic; anti microbial;

                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                  The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium and identifying a homologue of a gene derived from coryneform bacterium. Coryneform saccharides and organic acids, particularly L-1ysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Constructing strains for identifying gene products as effective targets for therapeutic intervention, by inactivating in the strain one allele of a gene and placing other allele of the gene under conditional

Barash SC, Ruben SM; HUMA-) HUMAN GENOME SCI INC WPI; 2001-465557/50. Rosen CA,

Nucleic acid molecules encoding human secreted chromosomal binding proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers -N-PSDB; AAS29105

Claim 11; SEQ ID, No 214; 561pp; English.

The present invention relates to the isolation of novel DNA-binding proteins, and cDNA (AAS29130-AAS29157) and genomic sequences encoding for these proteins. DNA-binding proteins such as histones, chromo (chromatin organisation modifier) domain proteins, and Y-box binding proteins may contribute to diseases resulting from aberrant. DNA organisation and/or gene transcription. The sequences of the invention are useful in screening assays to identify antagonists and/or agonists that may enhance or block activities mediated by DNA-binding proteins. Blockers of DNA-binding proteins may be useful in treating disorders such as malignant diseases (e.g. cancer), autoimmune disorders

The present invention relates to a new DNA-binding protein. The invention is useful in treating, preventing, diagnosing and/or prognosing immunodeficiencies (e.g. B cell immunodeficiencies, severe combined immunodeficiencies), evere combined immunodeficiencies), autoimmune disorders (theumatoid arthritis, multiple confined disorders mellitus), allergic reactions and conditions (e.g. asthma), inflammatory conditions, graft-versus-host disease, bloodcortelates (thrombosis, atheroscierosis), hyperproliferative disorders (e.g. cancer), renal disorders (e.g. acute glomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders (Goodpasture's syndrome), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease), endocrine disorders (e.g. Alzheimer's disease), infectious diseases (e.g. viral, bacterial or fungal infections) and cuseful to stimulate neuronal growth and treat, prevent, and/or diagnose cuseful to stimulate neuronal growth and treat, prevent, and/or diagnose cuseful to stimulate neuronal growth and treat, prevent, and/or diagnose cuseful to stimulate neuronal growth and treat, prevent, and/or diagnose cuseful to stimulate physical present amino acid sequence represents a chuman DNA-binding protein of the invention.

Chuman DNA-binding protein of the invention.

Chuman DNA-binding protein of the invention.

Chuman premo, at premo, but was obtained in electronic format directly fermingent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel DNA-binding protein useful for diagnosis, prognosis, prevention and treatment of immune, hyperproliferative, respiratory, cardiovascular, reproductive, endocrine, gastrointestinal and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A novel retro virus vector encodes human cytosolic aldehydedehydrogenase and/or human glutamylcysteine-synthetase (AAR63673). Hematopoietic cells transfected by the vector are resistant to cyclophosphamide, providing a means of gene therapy that allows higher doses of toxic drugs to be used in cancer chemotherapy. The human genes may also be used as selectable markers for mammalian cell transfection and for transgenic animal breeding. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Retroviral vectors encoding human cytosolic aldehyde dehydrogenase or glutamyl cysteine synthetase - used to transform a subject's haematopoietic cells to reduce the toxic effects of cyclo phosphamide chemotherapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The PLD gene was expressed in E. coli and the product shown to have sphingomyelinase activity.

The toxin can be used in the prepn. of vaccines for immunising sheep against caseous lymphadenties. The toxin may also be used in immunoassays for detection of antibody in diagnosis of CLA in sheep
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Corynebacterium pseudo-tuberculosis phospholipase toxin purificn. - by concn. crude toxin by ultrafiltration followed by chromatography on cation exchange resin

The invention relates to avilamycin derivatives (I) with antibacterial, virucide, protozoacide and fungicide activity. (I) are useful for reatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of an avilamycin synthesis enzyme from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-ABZ37516). New avilamycin derivatives, useful for treatment of infections, and nucleic acid encoding avilamycin synthesis enzymes Example 1; Page 68-301; 319pp; German.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

Patent No. 6380370
GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC-007
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Hook, Magnus

Sequence 6, Application US/09446301A;
Patent No. 6506893
GENERAL INFORMATION:
APPLICANT: EL SOLH, NEVINE
TITLE OF INVENTION: POLYNUCLEOTIDES AND THEIR USE FOR DETECTING RESISTANCE
TITLE OF INVENTION: POLYNUCLEOTIDES AND THEIR USE FOR DETECTING RESISTANCE
TITLE OF INVENTION: OCMPONING
FILE REFERENCE: 03715-0059
CURRENT FILING DATE: 1999-12-20
NUMBER OF SEQ ID NOS: 51
SEQ ID NO 6
LENGTH: 294
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-09-039-932-6

Sequence 26910, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
FALL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERBNCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR PILING DATE: 1999-02-18
                                                                                                                                                                                                                                                   TITLE OF INVENTION: No. 6348582el Prokaryotic Polynucleotides, TITLE OF INVENTION: Polypeptides and Their Uses NUMBER OF SEQUENCES: 534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 136;

Sequence 13806, Application US/10369493

Publication No. US20030233675A1

GENERAL INFORMATION:

APPLICANT: Hinkle, Gregory J.

APPLICANT: Slater, Steven C.

APPLICANT: Goldman, Barry S.

APPLICANT: Goldman, Barry S.

TITLE OF INVENTION: EXPRESSION OF MICROBIAL PROTEINS IN PLANTS FOR PRODUCTION OF

TITLE OF INVENTION: PLANTS WITH IMPROVED PROPERTIES

FILE REFERENCE: 38-10(52052)B

CURRENT FILING DATE: 2003-02-28

PRIOR APPLICATION NUMBER: US 60/360,039

PRIOR APPLICATION NUMBER: US 60/360,039

PRIOR SEQ ID NOS: 47374

SEQ ID NO 13806
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COTATION: (1). (478)

                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 20, Application US/09323998D

Patent No. US20020102631A1

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: CUNNINGHAM JR., FRANCIS X.

TITLE OF INVENTION: GENES OF CARCTENOID BIOSYNTHESIS AND METABOLISM AND TITLE OF INVENTION: METHODS OF USE THEREOF

FILE REFERENCE: 10972-09019

CURRENT FILING DATE: 1999-06-02

PRIOR APPLICATION NUMBER: US/09/323,998D

CURRENT FILING DATE: 1999-06-02

PRIOR FILING DATE: 1999-06-02

PRIOR FILING DATE: 1999-06-02

PRIOR APPLICATION NUMBER: 09/088,725

PRIOR APPLICATION NUMBER: 09/084,725

PRIOR APPLICATION NUMBER: 09/084,125

PRIOR FILING DATE: 1996-06-02

PRIOR PRILING DATE: 1996-06-02

SOFTWARE: PATENT ON UMBER: 08/524,125

RUMBER OF SEQ ID NOS: 61

SEQ ID NO 20

i Sequence 59, Application US/09323998D

i Patent No. US20020102611A1

CENERAL INFORMATION:

APPLICANT: CUNNINGHAM JR., FRANCIS X.

APPLICANT: SUN, ZAIREN

TITLE OF INVENTION: METHODS OF CAROTENOID BIOSYNTHESIS AND METABOLISM AND

TITLE OF INVENTION: METHODS OF USE THEREOF

CURRENT FILING DATE: 1099-06-02

PRIOR PELLING DATE: 1998-06-02

PRIOR PELLOATION NUMBER: 09/088,724

PRIOR PELLOR DATE: 1998-06-02

PRIOR PELLING DATE: 1996-06-02

PRIOR PELLOR DATE: 1996-03-25

PRIOR PELLING DATE: 1996-03-25

TURBER OF SEQ ID NOS: 61

SOFTWARE: PAT

CORGANISM: Nicotiana SP.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Contents: annotation; X-ray crystallography, 2.2 angstroms
C; Complex: homotetramer
C; Complex: homotetramer
C; Function:
C; Function: catalyzes the conversion of two of molecules of hydrogen peroxide to two A; Note: this enzyme has a tightly bound NADPH cofactor
C; Superfamily: catalase
C; Keywords: chromoprotein; heme; homotetramer; iron; metalloprotein; NADP; oxidoreductas
C; Keywords: chromoprotein; heme sulfone (Met) #status experimental
F; 54, 93, 127/Active site: His, Ser, Ash #status predicted
F; 54, 83, 127/Active site: His, Ser, Ash #status predicted
F; 337/Binding site: heme iron (Tyr) (axial ligand) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C; Accession: AB0148
